Architecture – BArch
Nottingham Trent University

User Experience Design – MA
Loughborough University

Digital Personal Assistants – PhD
Loughborough University

My research focuses on:

- What are householders' expectations of 'Alexa' and do past experiences impact the presumed usefulness of the device?
- How are routines made and maintained within the home and what does this mean for 'Alexa'?
- What are people doing with 'Alexa' to support their 'everyday' activities within the home?
- How can the temporal conditions of the home inform how future 'Alexa' devices are designed?

Research interest for LoT-NET:

- Who** is our target user and **How** can established routines and ritualistic habits be used to understand their needs?
- What** are the requirements for a low-temperature network within the domestic setting to satisfy user needs?
- How** might heating be used as a shared commodity within a community environment and does heating source impact use?
- What** are practical implications when supporting householders to transition to a low temperature network?
